Ruscists cannot put into operation any power unit of the temporarily occupied ZNPP

Due to the refusal of part of the Ukrainian staff of the Zaporizhzhia nuclear power plant [ZNPP] to cooperate with the occupationists *[sic]*, as well as the lack of their own personnel, the Russians can neither start up nor operate the plant's power units.

The Russians drove themselves into a personnel shortage by blocking access to the power plant to nearly 1,500 Ukrainian employees of the ZNPP who refused to get Russian passports and sign a contract with the fake JSC "Operating Organization of Zaporizhzhya NPP" or another Rosatom enterprise.

In order to improve their position, the invaders are looking for "new" nuclear workers for the ZNPP on the territory of the Russian Federation and are ready to settle future workers in nationalized, or rather--forcibly taken, apartments of Enerhodar residents who left the occupied town.

Furthermore, the gradual degradation of specialized equipment, which was caused by the ruscists with their miserable executives due to non-compliance with the required temperature regime, also prevents the units from being started.

However, the activity of the occupationists *[sic]* is manifested in another way: they continue to erect fortifications and build military structures around the power units of the Zaporizhzhia NPP and the Dry Spent Fuel Storage Facility (DSFSF). Such actions of the Russians are categorically unacceptable and violate all existing norms of nuclear and radiation safety.

Once again, we call on the world community to facilitate the withdrawal of the Russian military from the territory of the ZNPP and Enerhodar as soon as possible, to demilitarize the power plant and return it to the full control of Ukraine! This will save the world not only from a nuclear but also from a large-scale ecological disaster!
